---

## PROJECTS

### Aid Network using Python | GUI

Empower individuals and communities by providing a platform where people can offer and seek assistance. Facilitate connections between those in need and those willing to help, fostering a supportive and collaborative environment

### Solving Sudoku using Python

Create an engaging Sudoku game using Python, leveraging data structures and algorithms (DSA) for efficient puzzle generation and solving with least time and maximum points

### Canteen management system using C.

Developed a canteen management system in C, enabling canteen owners to manage stock and set prices, while allowing customers to browse and purchase items efficiently.

### Diabetic Retinopathy Detection using Machine Learning

Detecting Diabetic retinopathy in advance. Making sure people don't go blind by detecting it in advance before it reaches final stage.

---

## CERTIFICATIONS

Certified for completing Microsoft Azure machine Learning

Certified for completing Basics of Machine Learning in NPTEL.

Certified for completing Python in Udemy.

Certified for completing AIML Virtual internship in AICTE.

---

## SKILLS

**Programming:** C, Python, Java

**Technologies:** Machine Learning

**Database:** SQL
